Favinger
PLUMBING

Older sewer pipes and water lines can become blocked due to damage from roots, cracks, collapse or grade issues.

With trenchless repair, or "pipe bursting," we only need to excavate the ends of an existing pipe instead of having to dig up the entire line – great when you have landscaping, fences, driveways or sidewalks you don't want disturbed.

This type of repair is generally faster too – often taking just one day to complete.

PLUMBING

**Trenchless
Pipe
Repair**

Here's how it works:

Favinger
PLUMBING

- 1 DIG A HOLE AT EACH END OF THE PIPE.
- 2 FEED A PULLING CABLE THROUGH THE EXISTING PIPE.
- 3 CONNECT THE PULLING CABLE TO A BURSTING HEAD, WHICH IS ATTACHED TO THE NEW PIPE.
- 4 PULL THE NEW PIPE THROUGH THE OLD PIPE. THE BURSTING HEAD WILL BREAK UP THE OLD PIPE TO CLEAR A PATH FOR THE NEW PIPE.
- 5 CONNECT THE NEW PIPE TO THE CITY WATER OR SEWER LINE, AND TO THE HOME.
